Dear Hiring Manager,

I am excited to apply for the Full-Stack Engineer position at your company. Over the past 2 years at MMM Infosolutions, I have gained hands-on experience in designing, developing, and deploying web applications using Angular, Java, Groovy/Grails, MySQL, and REST APIs.

I have taken end-to-end ownership of three major projects—TRR, Indent, and Info Sphere—where I contributed both frontend and backend solutions. Additionally, I worked on enhancements across Capex, Markom, Task, Artwork, Material, and EDS, optimizing database queries and backend logic to improve performance. A key achievement was designing and integrating a real-time chat system in Capex using Jetty WebSocket, showcasing my ability to build scalable, interactive features.

Beyond professional projects, I developed a React + Tailwind Expense Tracker App with Google Translate integration, reflecting my ability to deliver complete, user-friendly applications with modern technologies.

I am passionate about building scalable full-stack solutions and would welcome the opportunity to contribute my expertise to your team. Thank you for reviewing my application. I look forward to discussing how I can support your engineering goals.

Sincerely,

Suneesh S
